

I completely rebuilt my website **from scratch.**

A fast, version-controlled resources hub for my students, engineering colleagues, and industry partners. Fully open source.

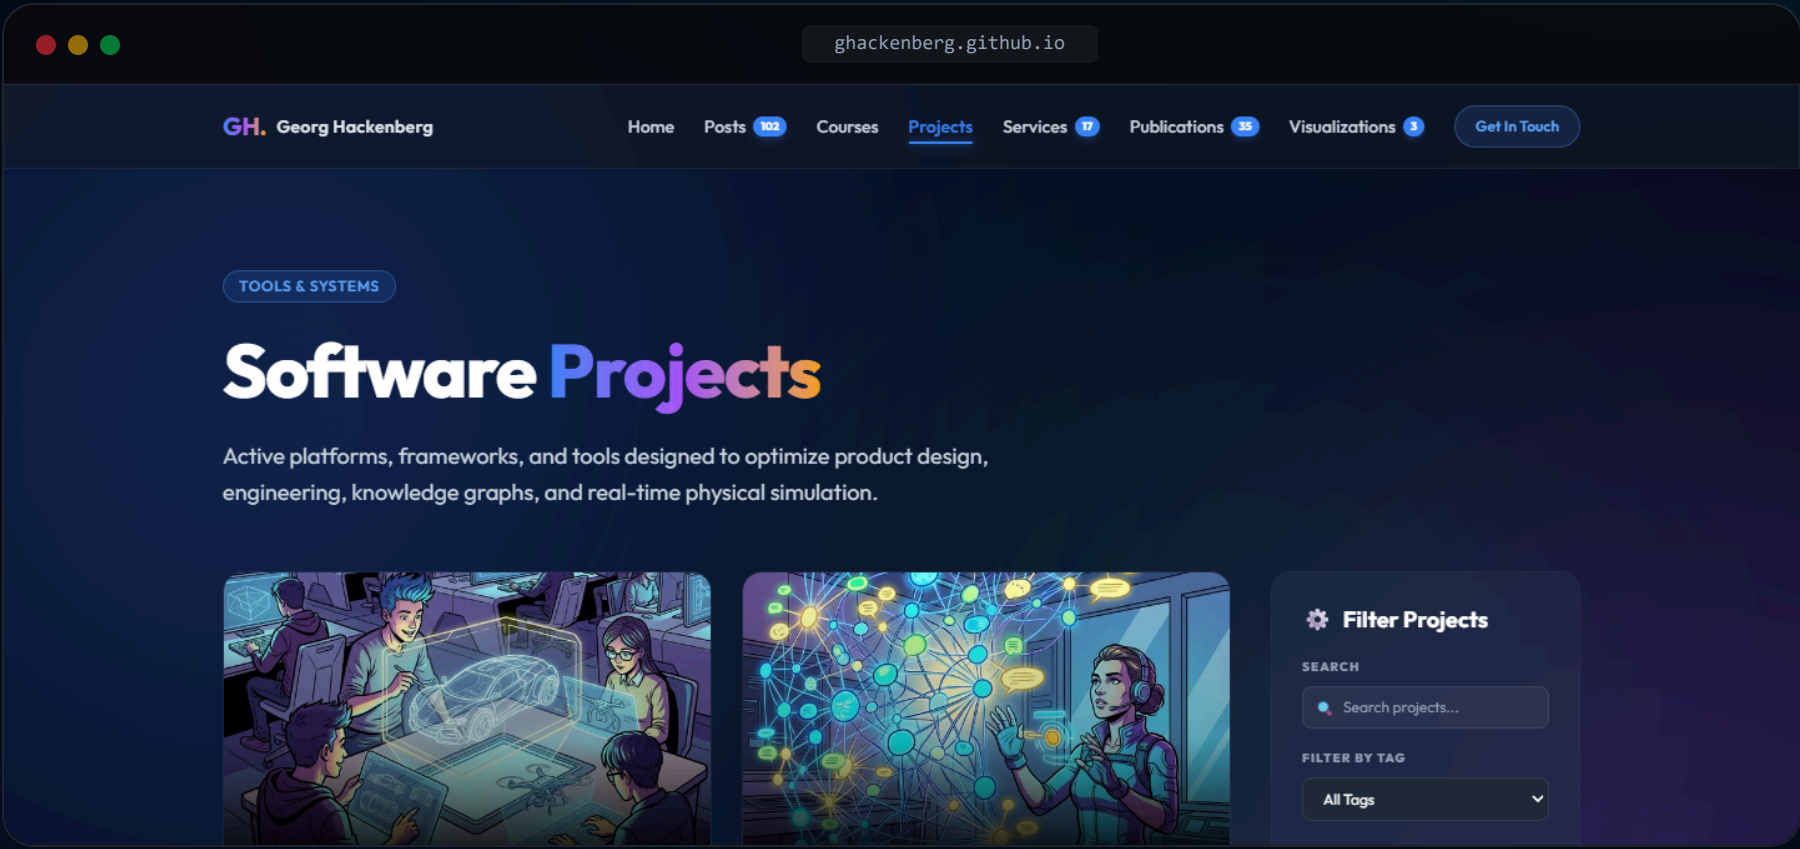

A Unified Hub for my Teaching Materials

An interactive catalog of my courses at FH Upper Austria—covering Systems Engineering, Agile Product Design, and Data Analysis.

Interactive Projects & Demos

Direct access to visual tools like k-means clustering, Monte Carlo simulations, and open-source projects like CADdrive and Mentawise.

Built as an **Offline-First Feed Database**

01 Astro & Tailwind v4

Pre-rendered static HTML with maximum load performance and modern v4 styling engine.

02 Content Collections

All posts and videos are stored locally as Markdown files serving as the master database.

03 Build-time Sync

A Node script queries APIs and merges engagement metrics into local files.

04 Fully Open Source

The entire site setup, config, and script history is hosted publicly on GitHub Pages.

OPEN SOURCE

Try It Out

Explore the Site & Code

Inspect the source files, clone the setup, or
check out my lecture slides directly.
